

HSBC MSCI Emerging Markets UCITS ETF

Fund Overview

January 2020

This document and any information it contains is not intended for Retail Clients in terms of Article 4 (para 1 (11)) EU Regulation 2014/65/EU. The document or parts of it may not be disclosed to any third party.

The strategy at a glance

The HSBC MSCI Emerging Market UCITS ETF aims to replicate the performance of the MSCI Emerging Markets Index, while focusing on minimising the tracking difference between the fund and the index. This is done through an easy and cost-efficient approach harnessing HSBC's expertise in passive investing.

About the Index

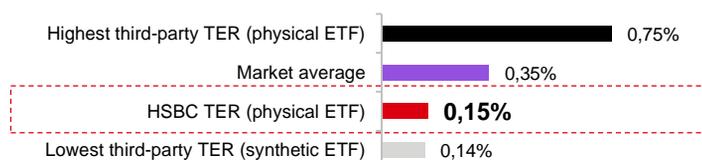

The MSCI Emerging Markets Index provides direct access to emerging market regions around the world, responsible for delivering the majority of global economic growth.

Dividend Yield	2.77%
No. of constituents	1,410

Source: MSCI, as at end of November 2019.

Cost efficiency in practice

- ◆ We recognise that the cost of investing and its impact on returns is in focus now more than ever when selecting an ETF.
- ◆ Our aim is to offer investors cost-efficient access to a physically optimised solution that tracks the MSCI Emerging Markets Index.
- ◆ As of January 2020, the TER of the HSBC MSCI Emerging Markets UCITS ETF was reduced from 0.40% to 0.15%.

Source: Bloomberg and HSBC Global Asset Management, as at December 2019. Market average and TER comparisons have been computed by looking at the TER of the main Europe-domiciled ETFs tracking the same benchmark.

Key Risks

The value of an investment in the portfolios and any income from them can go down as well as up and as with any investment you may not receive back the amount originally invested.

- ◆ **Counterparty Risk** The possibility that the counterparty to a transaction may be unwilling or unable to meet its obligations.
- ◆ **Derivatives Risk** Derivatives can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.
- ◆ **Emerging Markets Risk** Emerging markets are less established, and often more volatile, than developed markets and involve higher risks, particularly market, liquidity and currency risks.
- ◆ **Exchange Rate Risk** Changes in currency exchange rates could reduce or increase investment gains or investment losses, in some cases significantly.
- ◆ **Index Tracking Risk** To the extent that the Fund seeks to replicate index performance by holding individual securities, there is no guarantee that its composition or performance will exactly match that of the target index at any given time ("tracking error").
- ◆ **Investment Leverage Risk** Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- ◆ **Liquidity Risk** Liquidity Risk is the risk that a Fund may encounter difficulties meeting its obligations in respect of financial liabilities that are settled by delivering cash or other financial assets, thereby compromising existing or remaining investors.
- ◆ **Operational Risk** Operational risks may subject the Fund to errors affecting transactions, valuation, accounting, and financial reporting, among other things.

Further information can be found in the prospectus and Key Investor Information Document (KIID).
